DETAILED ACTION

Response to Amendment

1. This office action is in response to applicant's amendment filed, 11 February 2008, of application filed, with the above serial number, on 30 March 2004 in which claims 1, 6, 11, 16-18, 21, 23, and 27 have been amended and claims 22 and 24 have been cancelled. Claims 1-21, 23, and 25-27 are therefore pending in the application. It is noted Applicant has not responded to the rejection of claim 27. However, it will be assumed Applicant contends the claim to be allowable as depending on argued independent claim 16.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-10, 21, and 25, drawn to single node data splitting upon capacity realization, classified in class 709, subclass 221.
 - II. Claims 11-15, 23, and 26, drawn to new node initialization and zone transfer to meet minimum zone requirements, classified in class 709, subclass 222.
 - III. Claims 16-20 and 27, drawn to network resource allocation with real and virtual storage slots of a node, classified in class 709, subclass 226.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in

scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as splitting data into portions upon slot capacity being reached and transferring a portion to another slot within a same node. See MPEP § 806.05(d).

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as transferring zones to new nodes added to the peer-to-peer network. See MPEP § 806.05(d).

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination III has separate utility such as real storage slots for objects having real capacities along with virtual slots having virtual capacities, that when combined, exceed actual physical storage of a node. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a

continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
